

TAGINE INSTRUCTIONS

FIREPITS UK

HANDMADE IN BRITAIN

UNIQUE HAND-FORGED BRITISH MADE FIRE PITS

CAUTION: The steel of the tagine will get hot – do not touch without heat resistant gloves

Your tagine will be coated in manufacturing oil when it is delivered. We recommend seasoning the tagine prior to use to remove the oil. Heat to a medium temperature and wash with warm soapy water. Dry thoroughly and rub over with a small amount of cooking oil.

The Tagine is traditionally designed to cook tagine and casseroles. However, over the open fire it becomes multi-functional and can also be used for roasting and smoking.

To use for slow cooking

1. Heat the Tagine prior to cooking by placing over hot embers and allow to warm for five minutes.
2. Add your cooking oil to the heat and add your ingredients according to your chosen recipe. Cook over the hot embers rather than the flames to get a more consistent temperature.
3. Continue to feed the fire and move your embers across beneath your Tagine to maintain a low temperature for slow cooking.

To use as a smoking chamber

1. Use over a low heat of hot embers, not flames. Add your smoker chips or smoking powder to the bowl; the chips usually come with instructions – abide by the amounts stated. Place the rack above the smoker chips; place the food you're going to smoke on top of the grill and pop the lid on.
2. Put the Tagine on the BBQ Rack over the hot embers. Smoke the contents for the stated length of time on the smoker pellets instructions. When the powder has burnt out or stated length of time is up and you wish to smoker for longer – add more chips and continue.

To clean your swing arm and any other Firepits UK cookware, wash the item well and dry thoroughly. Rub over some cooking oil before storing away. If any rust develops, scrub this off with a wire brush and repeat the seasoning process above.

Your fire pit is designed to live outdoors all year round and over time it will develop its own natural patina. If you wish to you can rub over with a wire brush and then oil. However, it is fine to leave them outside and allow them to take their natural course.

Please be aware that as the fire pits will oxidise, rust can mark stone terraces and paving slabs. If placed on a lawn, the heat from the fire may scorch the grass underneath.
