

INDIAN FIRE BOWL COLLECTION INSTRUCTIONS

INDIAN FIRE BOWLS made from RECYCLED STEEL

CAUTION: The steel of the fire pit will get hot – do not touch without heat resistant gloves

Your fire pit will be coated in manufacturing oil when it is delivered but don't worry as this will burn off with your first fire.

1. Place a layer of sand into the base of your firepit to protect the steel and build your fire onto this base.
2. Light your fire at least 30 minutes before you want to cook, using kindling and kiln dried logs to reduce smoke. Build a large fire so it creates enough hot embers to cook over.
3. Use an ash rake to split the fire, with hot embers to one side and the burning fire to the other. Keep feeding the fire with logs to keep the flames burning.
4. Add your BBQ rack when you are ready to start cooking over the hot embers. Do not cook over the open flames.
5. The BBQ rack has ball knobs at both ends which can be used to slide the rack around the fire pit allowing you to place it over and away from the heat as required.
6. Remove the BBQ rack when you've finished cooking and set to one side while you build up the fire to enjoy the warmth into the evening.

To clean your BBQ rack and any other Firepits UK cookware, wash the item well and dry thoroughly. Rub over some cooking oil before storing away. If any rust develops, scrub this off with a wire brush and repeat the seasoning process above.

Your fire pit is designed to live outdoors all year round and over time it will develop its own natural patina. If you wish to you can rub over with a wire brush and then oil. However, it is fine to leave them outside and allow them to take their natural course.

Please be aware that as the fire pits will oxidise, rust can mark stone terraces and paving slabs. If placed on a lawn, the heat from the fire may scorch the grass underneath.
